

Yoseph Endawoke

(617)-372-5498 | ye38@cornell.edu | www.linkedin.com/in/yosephendawoke | yosephendawoke.me

Education

Cornell University, College of Engineering | Ithaca, NY

Expected May 2027

Bachelor of Science in Computer Science | Minor: Applied Mathematics

Related Courses: Algorithms, Compilers, Functional Programming, Computer Networks, Computer Organization

Skills

Back-end Tools: Java, Python, C++, C#, SQL, Flask, PostgreSQL, OCaml

Front-end Tools: JavaScript, HTML, CSS, Unity, TypeScript, Bootstrap, ReactJS, Angular

Technologies: Git, Visual Studio, Docker, Kubernetes, Google Cloud, IntelliJ, Rider

Experiences

Meta | Menlo Park, CA

May 2026 – August 2026

Software Engineer Intern

- Achieved **99.9%** parity between Python/C++ clients for AI-asset search, validated against **250,000+** requests.
- Generated equivalent **Python** and **PHP** clients from **C++** via internal code-gen, making C++ the source of truth.
- Migrated **100%** of traffic to the generated client with minimal issues and lower latency than the legacy client.

Niantic Labs | Bellevue, WA

May 2025 – August 2025

Software Engineer Intern

- Implemented a new quest for **Pokémon GO (60M+ MAU)** with scalable server logic and quest state handling.
- Engineered a raid rejoin feature end-to-end in **Java/Unity**, adding new Protobuf schemas and backend service.
- Feature expected to save **~\$1.5M** annually by reducing support reimbursements from lost Raid Passes.

Siemens | Remote

May 2024 - January 2025

Software Engineer Intern

- Developed prototype enterprise application using **.NET** and **Angular**, focusing on functionality and scalability.
- Created a scalable API from scratch implementing **15 endpoints**, learning more about production code.
- Demoed project to **20+ engineers and managers**, leading to the integration of 3 new user-requested features.

ColorStack Cornell (URMC) | [URMC Website](#) | Ithaca, NY

December 2023 – December 2025

Full Stack Software Engineer

- Converted Google Sheets info to a **PostgreSQL** database, allowing us to store user info in various places.
- Built a tool with **Flask**, **HTML**, and **CSS** to parse Google Form IDs and update a PostgreSQL member database.
- Enabled live site updates by connecting the website to the database, removing the need for redeployment.

Cornell Engineering | Ithaca, NY

February 2026 - May 2026

CS 4300 Teaching Assistant - Language and Information

- Graded coursework, helped develop exams, and held office hours for students in information retrieval and NLP.
- Mentored a project team through weekly meetings a semester-long information retrieval system with RAG.

Projects

Eta/Rho Compiler (etac) | [Eta Specification](#) | Rust, LALRPOP, Logos

- Built a **Rust** compiler (lexer, parser, type checker, IR gen, codegen) translating Eta to **x86-64 assembly**.
- Implemented graph-coloring register allocation and **dataflow optimizations** (CSE, DCE, copy propagation).
- Verified correctness with **73+ unit tests** and differential benchmark testing.

Functional Texas Hold'em | OCaml

[GitHub Repository](#)

- Built Texas Hold'em in **OCaml** with full poker mechanics using functional programming principles.
- Created AI opponents with probabilistic decision-making and achieved **80%+ test coverage** using **OUnit**.
- Designed **modular architecture** emphasizing immutability and clean functional design.

AniMate | HTML, CSS, JavaScript, NumPy, Pandas, Flask

[GitHub Repository](#)

- Developed an anime recommendation app that suggests titles based on user input or descriptive prompts.
- Applied NLP algorithms to utilize text-based **vector space model** and generate relevant recommendations.
- Designed an intuitive interface for users to explore anime based on themes, genres, or favorites.
